

Hariom Patel

Software Developer • Fullstack Developer • Frontend Developer

Ujjain Engineering College Ujjain • 2023 Pass out

Projects

GoFood

- Provide a convenient and user-friendly platform for food ordering and delivery.
- Seamless integration of frontend and backend technologies: The GoFood project utilizes the MERN (MongoDB, Express.js, React, Node.js) stack to build a full-stack application. This involves setting up the backend server using Express.js and Node.js, integrating it with a MongoDB database for storing restaurant and menu data, and developing a responsive frontend using React.
- User registration, authentication, and profile management: The GoFood application provides user registration and authentication functionality, allowing users to create accounts, log in securely, and manage their profiles. Users can save their delivery addresses, view order history, and update their personal information. This feature enhances user experience and enables personalized services for customers.

Skills Developed: MongoDB, ExpressJs, React.js, NodeJs, Material-UI, Bootstrap, Javascript

Achievements/ Extracurricular Activities

- National level chess player

Skills

MongoDB | ExpressJs | React.js | NodeJs | Javascript

Education

Ujjain Engineering College Ujjain, Indore Road,
